

• TWO NEIGHBOURING VILLAS · TWO AMBITIONS · ONE PLATFORM

The same platform, **at the level each one chooses.**

Two neighbouring villas in Villars-sous-Yens, equipped with the same platform — but not at the same level: one goes all in, the other keeps to the essentials. That is exactly the idea of casasmooth: **start where you want, extend when you want** — without changing systems, without redoing anything.

Villa no. 1 — complete

- **488 devices** across 14 rooms and zones: 68 lights, shutters, multi-zone heating, 4 cameras.
- Comfort, security and energy managed together, every day.

Villa no. 2 — essential

- **88 devices** across 14 rooms: 39 lights and the functions of daily life.
- The same foundation, ready to grow when the need comes.

What the duo proves

- The platform imposes no equipment level — it adapts to the project and the budget.
- Both houses are operated the same way: updates, backups, monitoring.

MODULARITY IN PRACTICE

START

Each their own entry point

The essentials first — lighting, presence, daily life — or the full build straight away.

GROWTH

Extend without redoing

Adding devices or domains puts nothing in question: the configuration follows.

COHERENCE

A single logic

Same rules, same dashboards, same app — whatever the equipment level.

OPERATIONS

Operated, not delivered

Both villas are continuously looked after: device health, backups, new features.

THE TWO VILLAS IN NUMBERS

Two neighbouring houses, measured on the same day.

576

controlled devices in total

28

rooms and zones

107

lighting points

24/7

local operation, even offline

Numbers taken from real operation — not brochure promises: both installations are in service and looked after daily.
